LABOUR GAZETTE

Started in 1921, the Labour Gazette, issued monthly, is a journal for the use of all interested in obtaining prompt and accurate information on matters specially affecting labour in India and abroad. It contains statistical and other information on consumer price index numbers for working class, industrial disputes, absenteeism, trade unions, industrial relations, cases under labour laws, glimpses of industrial awards, labour legislation, etc. Special articles embodying results of enquiries and research relating to wages, hours of work, unemployment, family budgets, etc., are published from time to time.

Annual subscription for the year Sept. 1974—Aug. 1975 is being accepted at Rs. 12.

All amounts are payable in advance in Bombay, in full, either by M.O. or Cheques/Drafts drawn on Bombay Banks.

ALL CORRESPONDENCE AND REMITTANCES SHOULD BE ADDRESSED TO:

The Commissioner of Labour, 'Commerce Centre', Tardeo, Bombay-34: WB (India).

Tel. No. 393651

LAB	OUR INTELLIGENCE—
l.	Industrial Relations in Maharashtra Review for the month of January 1975.
2.	Industrial Disputes in Maharashtra during the Month of January 1975.

Editor:

Shri M. B. DURVE,

Deputy Commissioner of Labour, Maliarashtra, Bombay (Ex-Officio).

The Month in Brief

Consumer Price Index Number for Working Class

The Bombay, Sholapur and Nagpur Consumer Price Index Numbers for Working Class for the month of March 1975 with the average prices for the year ended December 1960 equal to 100 were 301, 345 and 332, respectively. The Jalgaon, Nanded, Poona and Aurangabad Consumer Price Index Numbers for Working Class for the month of March 1975 with the average prices for the year ended December 1961 equal to 100 were 339, 358, 295 and 336 rsepectively.

Industrial Disputes

During January 1975, there were 76 strikes involving 11,168 workmen and a time-loss of 1,66,957 working days, as compared to 77 disputes in December 1974, involving 13,209 workmen and a time-loss of 1,37,870 man-days. Further particulars of industrial disputes are given at pages issue.

Current Notes

Higher P. F. Interest Mooted

The Central Board of Trustees of the Employees Provident Fund has recommended the payment of interest at 7 percent on the accumulations in the provident fund for the accounting year 1975-76.

The Board has also recommended that the exemption limit under the Income Tax Act for the interest earnings on the fund should be raised from 6:5 percent to 7 percent.

The total contribution to the fund by the end of September 1974 was Rs. 3123.90 crores. A sum of Rs. 89.82 crores was received as contribution from both exempted and unexempted establishments during the quarter ending September 30, 1974.

Wage Body for Brick and Roof Units in Maharashtra

The Government of Maharashtra has appointed a committee under the Chairmanship of Shri Chhedilal Gupta of Gondia to hold enquiries into the conditions in the employment in brick or roof tiles (torra cotta or earthen) manufactory and to advise the Government in the matter of revision of minimum wages in the employment.

Shri R. E. Chaurasia, Assistant Commissioner of Labour, Nagpur will be the Member Secretary of the Committee.

The committee has to submit its report to the Government within six months

Wages Panel for Plastics Units in Maharashtra

The Government of Maharashtra has appointed a committee under the Chairmanship of Shri Umar Kazi, M.L.A. to hold enquiries into the conditions in the employment in any industry in which any process of transforming plastics into variuos solid shapes through moulding forming extrusion or casting by application singly or together with heat or pressure or other similar work or work incidental to such process is carried and to advise the Government in the matter of revision of minimum wages in the employment.

Shri S. P. Gaitonde, Assistant Commissioner of Labour, Bombay is the Member-Secretary of the Committee.

The Committee has to submit its report to the Government within six months.

Tea Industry Nationalisation Ruled Out

Prof. D. P. Chattopadhyaya, Minister for Commerce, ruled out in the Rajya Sabha nationalisation of the tea industry.

Replying to supplementares, during question hour, the Minister said that outright nationalisation of the tea industry would not be a correct answer to the present problems in the tea industry. "We have studied these problems in depth and we feel the nationalisation is not the answer to the tea industry's problems at the present stage.

Delhi's Job Schemes Okayed

Shri Radha Ramn, Chief Executive Councillors said at Delhi on 14th February 1975 that Delhi Administration had received formal sanction to the tune of Rs. 56.20 lakhs for its all Schemes under the Special Employment Promotion Programme for 1974-75. The schemes are to give direct employment opportunities to 1,049 and indirect employment to several thousand others. He said since the departments concerned had already taken advance action, the programmes had already been launched and some of them are inadvance stage of implementation. There would therefore, be no difficulty in utilisation of funds

These programmes are for providing employment to educated unemployment. specially Engineering Graduates and Technocrates. The last two schemes are

for Matriculates.

No take over of Foreign Drug Units

The Minister of State for Petroleum and Chemicals Shri K. R. Ganesh, said that at present the Government did not intend to take over foreign drug companies, but wanted to reduce their dominance.

Replying to supplementaries in the Lok Sabha, the Minister said Indian as

well as public sector drug units would be given all ecouragement.

Replying to the main question the minister said there was no general shortage

of drugs in the country.

The supply position was recently discussed with the representative of a number of companies and the following drugs were found to be in short supply: Heparin, triple antigen injection, anaeshetic estutither, adrenaline, vitamin B6 and codeine phosphate.

Steps had already been taken to relieve the shortages both through imports

and increased indigenous production.

S. B. Patil, New Labour Minister in Maharashtra

Shri S. B. Chavan, who recently took over as Chief Minister from Shri V. P. Naik, has announced the allocation of portfolios in his new Cabinet. In the new cabinet of Shri Chavan, the Labour Portfolio has been entrusted to the charge of Shri S. B. Patil, along with Animal Husbandry, Dairy Development nd Fisheries.
The erstwhile Labour Minister, Shri N. M. Tidke now holds charge of the and Fisheries.

Ministry of Industries and Legislative Affairs.

Legislation soon for Equal Pay for Women with the contract the contract of the

The Union Labour Minister, Shri Raghunatha Reddy, told the Executive of the Congress Parliamentary Party in New Delhi on March 12 that a Bill to guarantee equal pay for equal work, irrespective of sex would be introduced in Parliament soon.

Labour Representation on Tobacco Board

In reply to a suggestion that workers must also be represented on Tobacco Board made by Shri J. N. Bharadwaj, M. P., while intervening in the debate on Tobacco Board in Rajya Sabha on March 6, the Minister of Commerce said that he has noted this suggestion, which he apparently seemed inclined to accept. Shri V. B. Raju, M. P., also supported the suggestion.

Wage Panel for Glass Industry

A Committee has been appointed by the Maharashtra State Government, under the chairmanship of Shri R. L. Tripathi, M.L.A., to hold enquiries into the conditions in the employment in glass industry and to advise Government in the matter of revision of minimum rates of wages in the said employment.

Minimum Wages Panel for Plastic Industry

A committee, under the chairmanship of Shri Umar Kazi, M.L.A., has been appointed by the Maharashtra State Government to hold enquiries into the conditions in the employment in any industry in which any process of transforming plastics into various solid shapes, through moulding, forming, extrusions or casting by application singly or together with heat or pressure or other similar work or work incidental to such process is carried, and to advise the Government in the matter of revision of minimum wages in the employment.

Smt. S. P. Gaitonde, Assistant Commissioner of Labour, Bombay, is the nember-secretary of the Committee.

Minimum Wages Act for Legal Profession Employees too

With a view to fixing the minimum rates of wages in respect of the employment in the establishments maintained in connection with legal profession by advocates or attorneys of the High Court of judicature at Bombay or by any association, society or other body formed by the advocates or attorneys, the Government of Maharashtra has added this employment to the part I of the schedule to the Minimum Wages Act, 1948.

Minimum Wage Award upheld

Chief Justice B. J. Desai and Justice D. A. Desai rejected a batch of write petitions filed by Chandan Metal Workers and others and upheld the Industrial Tribunal's awards with regard to minimum wages in the engineering industry. The petitioners contention that their firms do not come under the definition of "engineering industry" as defined by the Wage Board was not accepted.

The Court held that the Engineering Wage Board has adopted the definition of engineering industry unanimously. It covered the units engaged in shipping or production of ferrous and ferrous metals by turning, welding, etc. The petitioners were manufacturing different kinds of metal products.

The Court further ruled that the Chairman and independent members of Wage Board had observed at various places that the wages recommended by them were essential minimum wages in the industry. An employer who could not aford to pay minimum wages to the employees was a drag on the society and had no right to exist, the Court added.

The Court also pointed out that the position of the engineering industry with regard to its sales, reserves and profitability ratios, was better than the of other industries like sugar, cement and textiles.

The Court also held that the Wage Board had taken into account the paying capacity of the industry on an industry-cum-region basis after taking a fair cross-section of the industry in that region.

The judgement will affect about 150 cases of engineering units pending in the Industrial Tribunal.

Sugar Workers win Wage Increase

As a result of the struggle of INTUC leadership the minimum Wage of the Sugar workers in Nizamabad Co-operative Sugar Factory, has gone up to Rs. 306 per month under an agreement signed by the Sugar Employees Union, Nizamabad and the management of the Factory, on February 26. Giving details of the agreement Shri K. M. Khan, President of the Union, said here that following the settlement each worker of the factory will get minimum of Rs. 78 per month. He said the Union and the management have also agreed for the revision of retaining allowance for seasonal staff from 8 1/3 per cent to 10 per cent. He hoped the settlement will increase efficiency and productivity.

The agreement was signed among others by Shri K. M. Khan, and Shri V. Venkaiah, General Secretary on behalf of the Union, and Allah Yar Khan, Person-in-Charge of the Nizamabad Co-operative Sugar Factory Limited, on behalf of the management.

M. P. State Advisory Council for Contract Labourers: Viyogi selected Member The Madhya Pradesh Government has constituted a State Advisory Council for going into the grievances of contract labour and suggesting remedies thereof, in exercise of the powers given under section 8, rule 3 of the Contract Labour Act of 1970, with the State Labour Minister as its chairman. The Government has appointed the M. P. INTUC General Secretary Shri Tarasingh Viyogi, as a member of this council. Besides the Labour Minister, there will be 12 members on the council, including the Labour Commissioner and the Secretary in the Department of Labour.

It may be remembered that after the enactment of the aforesaid Act, the State INTUC under the leadership of Shri Viyogi, had been for long pressing for the setting up of such a Council for the amelioration of the conditions of contract labourers by removing the various medieval systems of exploitation, to which they are still subjected.

CONSUMER PRICE INDEX NUMBERS IN MAHARASHTRA STATE

HISTORICAL DEVELOPMENTS AND SPECIAL FEATURES

P. J. OVID*

GENERAL

1. Introduction

With the cost of Living rising speedily dearness allowance has assumed great importance in the wage structure of industrial employees. Though different methods are adopted by employers to give additional remuneration to employees with a view to neutralise the rise in the cost of living, the common demand the working class is to link dearness allowance with Consumer Price Index. Besides, of all the numerous statistical products that are currently available to the common man, the Consumer Price Index Numbers are perhaps the most widely used statistics but whose real meaning and import are not generally correctly understood. A clearer understanding of this concept, therefore, becomes imperative for those in the industrial field. An attempt has been made by the Author in this Article to bring out in simple non-technical terms, the correct meaning and significance of the Consumer Price Index Numbers.

2. What are Index Numbers?

ndex Numbers are statistical indicators of changes in certain economic, social and related phonomena.

3. What are Consumer Price Index Numbers?

Consumer Price Index Numbers are intended to show, over a period of time, the average percentage change in the prices paid by the consumers belonging to the population group covered by the index, for a fixed list of goods and services consumed by them. The average percentage change measured by the Index is calculated month after month with reference to a fixed period. This fixed period is known as the "base period" of the Index. Since the object of the Index is to measure the effect of the price changes only, the price changes have to be determined with reference to a fixed list of goods and services of consumption, which is known as the fixed "basket of goods and services. The basket embodies a particular level of living. The Index during the base period is taken to be 100 so that the indices for later periods are automatically expressed as percentages of the Index of the base period.

4. Consumer Price Index and Cost of Living Index

The Consumer Price Index is different from what is known as the Cost of Living Index. The former does not measure the absolute level of prices. It also does not measure changes in the total expenditure of the population group or in other words their actual cost of living. It measures the effect of price changes only. The Cost of Living Index Number; in the true sense of the term, has to take into account various factors, but a Consumer Price Index Number is designed to measure only one particular aspect of the cost of living and that is the effect of the price changes.

5. Construction of Consumer Price Index Numbers

In constructing a Series of Consumer Price Index Numbers, its main purpose cannot be lost sight of and has to be given the formost consideration. Naturally the first task is to define the group of consumers to which the Index is to relate. Broadly, this has to be defined in terms of the class of population e.g. working class, middle class, etc., and its geographical area.

The second task to determine the consumption level and the pattern of the population group at a particular period of time, which generally becomes the base period of the Index numbers. From this consumption pattern the fixed basket of goods and services can be ascertained for inclusion in the Index. The basket usually consists of:

Important commodities and services entering into the consumption of the population group. Commodities will include items of food (e.g. rice, wheat, pulses, milk, etc.) fuel and light (Kerosene Oil, fire wood, match box, etc.) clothing (dhoti, sari, shirting etc.) and others (pan, supari, washing soap, hair-oil etc.). Under the head 'services' there will be expenses such as barber charges, bus fare, doctor's fees, entertainment charges, etc. The number of commodities and services included for this purpose in the fixed basket generally varies from 40 to 100 in the existing working Class Consumer Price Index Numbers.

A description of the quality of each commodity and service is essential for measuring price changes. Generally, a quality that is most popularly consumed by the population group concerned is selected.

The articles of consumer pattern will have to be given a "weight" or importance attached to each commodity or service. For instance, if Rice is considered to be twice as important as wheat in the consumption pattern, the weight of Rice will be two in relation to one of wheat.

The third task is to arrange for the regular collection of price data for the various qualities of commodities and services entering into the basket. Prices collected should be those actually charged to the consumer. They are to be collected by trained personnel; who have to visit personally selected shops on a particular day between fixed timings every week. Effective checks and counter-checks are also to be provided for verification of the data at different levels.

The fourth task is to compile the Consumer Price Index numbers month after month, subsequent to the base period. For this purpose for each commodity and service an average price for the base period is to be computed. For

the current month, for which the Index is to be compiled a similar average price has also to be computed. A weighted average of these percentage changes for all the commodities and services gives the Consumer Price Index number. The weighted average is to be used for this purpose because the various commodities and services included in the Index are not of equal importance.

6. Weights used in Consumer Price Index Numbers

Weights are meant to indicate the importance attached to the percentage changes in the prices paid by the consumers for different itemes (commodition and services) of consumption. It is common knowledge that people do not spend the same amount of money on different items of consumption. It will therefore, not be correct to treat the percentage changes in prices of all the item included in the basket as of equal importance. Accordingly, each item in the Index is given what is called in technical language a "weight" to represent the relative importance of the price charged in a given pattern of consumption. The percentage changes of prices for the different items included in the Index amultiplied by the weights, before they are averaged to yield the Index Number According to the method of calculation followed, weights are assigned to individual items within sub-groups and then to a group and then to main groups e.g., food, fuel and light, housing, clothing, bedding, foot-wear and miscel laneous. The whole structure of weights is known as "weighting diagram and then the Consumer Price Index Number is assessed.

7. Source of Weights—Family budget Enquiry

The weights adopted for the compilation of Consumer Price Index Number series are based on the consumption pattern of the class of population at the particular centre or area to which the Index relates. The statistical data on the consumption pattern are generally collected by conducting Family budget Enquiry or survey among the population group for which the Index is proposed to be constructed. In a Family budget Enquiry, data could be and are collected on many aspects of family living but those which are most relevant for obtaining on each item of goods and services consumed by the families. The data from each sample family usually relates to a short period, say a week or a month, for which the data of income and expenditure can be remembered by the head of year in an appropriate manner in order to remove the seasonal effects. After averaged to yield what is known as the "average budget".

The commodities and services, which are selected for inclusion in the Index foot-wear, house rent and miscellaneous. In each of these groups, a sample of selected items are taken into account in Index calculation. It is not necessary movement of one particular item can often reflect the same for several other and the price of both has risen by 20 per cent as compared to the base period of

the Index, then, if one of the two items is selected and the weight of both, i.e. 13 is assigned to it, the Index calculation will remain unaffected. This principle is, the efore made use of and only a sample of the items is included in the Index for each group to represent the price movement of all the items of that group in the average budget.

8. Imputation of Expenditure

Since only a sample of items from each group is included in the Index, a point arises as to what happens to other items featuring in the average budget but not included in the Index. Their weights are added or distributed in the items to be included in the Index so that the total expenditure of the average budget is fully taken into account in the weights adopted for the Index. This process is known as "Imputation of weights"; e.g., the weight of curd can be added to milk, on the assumption that the prices of the two will move together. Also for example an item like "other food" featuring in the average budget can be assumed to allow the price trend of the food group as a whole. Its weight is, therefore, to be distributed over all items included in the food group in proportion to the individual weights.

9. Method of Derivation of Weights

The Family Budget Enquiries yield an average budget, which shows items entering into the consumption of the population group and the average expenditure on each item. These items are classified into specified consumption groups. Expenditure on each of the selected items is recorded in the average budget. This expenditure is expressed as a percentage of the total of all such expenditure for all the items included in the group and this percentage becomes the weight of the item. Thus the weights of all the items included in the group will add up to 100.

The group weights again add up to 100 and each of the groups has again a separate weight. This fixing of weights is called a "Weighting Diagram.". The weighting diagram once derived from the results of the Family Budget Enquiry is kept fixed because if it were to change, the Consumer Price Index Number would not measure the effect of the price changes only but will also be subject to variations due to changes in weights. Since the weights are based on the expenditure pattern of a broad population group at a certain period of time and since the expenditure pattern of the population group does not remain constant, it becomes necessary to revise the "weighting diagram", on the basis of the results of the fresh Family Budget Enquiries, from time to time, say at intervals of 10 or 15 years, in normal times.

10. Prices used in Consumer Price Index Numbers

Besides the weights, the only other study of primary data entering into the compilation of a series of Consumer Price Index Numbers are the prices. The price data have to be collected continuously, month after month, from the base period of the Index onwards. Usually, arrangements are made for the collection of the price data simultaneously with the conduct of the family budget enquiry. Prices are to be collected for all the items of "commodities or services", which will be finally included in the Index. However, since the items can be selected for inclusion in the Index only after the results of the

Family Budget Enquiry are tabulated and the "average budget" is avain the initial stages, the items are chosen on the basis of local enquiries in consumption habits of the population groups concerned and the list of is kept as large as possible in order not to miss any important items, which finally be included in the Index. Special arrangements have also to be for collection of periodical, say, six monthly data on house rent the special rapid sample surveys. The Prices are collected on fixed days week at fixed timings. Further care has to be taken to see that price collected for the same qualities of goods and services for the same units from same shops.

11. Quality Specifications and Adjustments in Change

The most important change to guard against is the change in quality. a change can introduce a serious error in the Index. The quality specific are required to be developed methodically and with a good deal of c making independent market enquiries on an extensive scale by cons manufacturers, experienced shop-keepers, etc. If a particular variety tioned in the specification is not available in the market, it is permiss collect prices for another variety in the same quality-range and hence fu the same specifications. This procedure is known as "substitution" a frequently to be resorted to, particularly in the case of clothing articles for varieties available in the shops generally go on changing. In making tutions, equivalence in quality of the two varieties (specified and subst is judged on the basis of the physical characteristics like colour, texture durability, etc. and not on the basis of the price range alone. It does times happen that no variety fulfilling the specification, is available in the n In such cases, the Price Collector furnishes price of an alternate variety larly consumed by the population group concerned, indicating specifical this price relates to a different quality and the percentage quality diff Such a price has to be adjusted properly so as to conform to the proquality, before it can be used for Index calculations.

12. Other specifications and Adjustments in Change

The same principles as mentioned above are followed in the case of a price collection, e.g. per Kg., per metre, etc., and the prescribed units are in which the population group mostly buys the particular common service. As regards sliops, a desirable degree of elasticity is assured by sing a few selected shops and a few reserved shops and instructing the Collector to collect prices, as far as possible, from the selected shops, that is not possible, then from reserved shops; and if that is not possible from reserved shops; and if that also is not possible, then only from shops in the market. The price collection day is also fixed, but if it occas changes due to special reasons, such as closure of market, hartals, bundle then the prices are collected on the next day. The prices are those actually paid by the consumers of the population group concerned for transactions and hence include all taxes, e.g. sales-tax, municipal tax, entertainment tax, etc., charged to the consumers.

Great care is required to be taken to ensure that the prices reported week are correct and are collected systematically. The Price Collector instructions to verify the prices quoted by the selected shop-keepers from

purchasers and from other shops in the market. This is to be done by them every week, for a few items, a different set of items being taken every time. They have also to check up all cases of large price variations by investigating into the causes for the same before reporting the prices.

13. Method of Compilation of Consumer Price Index Numbers

The weights and prices of the various selected items are finally combined into the Index according to a statistical formula, popularly known as the "Laspeyre's Formula". The basic concept of this formula is a weighted average of priceratios, the weights being the values of expenditure during the base period. The application of this formula in practice means that for each item an average price for the base period is calculated on the basis of the weekly prices reported month after month for the entire period. This price is known as the baseprice' of the item and is kept fixed. For the current period, i.e. the month for which the Index is to be compiled, again an average price of each item is calculated by taking a simple arithmetical average of all the weekly quotations received during a month. The ratio of the price for the current month to the corresponding base price gives a measure of the price change for each item for the current month, as compared to the fixed base period. The ratio for each item is expressed as a percentage, taking the base period as 100 and this percentage is called the 'price-relative' of the item. If more than one variety are being priced for an item the price-relative is calculated separately for each variety and then a simple average of this price-relative is taken to be the pricerelative of the item. Price-relative of each item for all items in a group is divided by the sum of the weights of the items and the resultant figure is the Group Index Number. The following illustration* will make this clear. For purposes of the illustration, only three items are taken, viz., Rice, Milk and Meat, which constitute the Food Group and the Group Index for 1960 as base:

1960 100 is computed in this illustration:—

Commodity	Quality specifi-	Weight of the	Averag prices p Lit		Price relative (percentauge change) in	Product of price relative and
	cation :	ps	eriod	period	base period	weight's column (3) column (6)
2/15 1 - 6 - 6 - 6 - 6			960) (Janu			
D	(2)	(3)	(4)	(5)	(6)	(7) in 4
Rice:	Gurmutia; broken medi um 'Cow's, Medium'	60 25	0.50	0:52 0:40	104·0 111·1	6 240 2,778
Meat	quality: Goat's, Medium Quality	15.	1:50 	1.75	116.7	1,750 -
P					. 6 - 14 - 6 2 - 1 . 1 . 12 6 1 2 2	1 1 2 3 1 1 1 1 5 1 1 E

Food Index = Sum of Products in Column (7)

The above method of computation is applied separately to all the to obtain all the Group Index Numbers. In the second stage, the "Index Numbers" are again multiplied by the respective group weights a sum of the products is again divided by the sum of the weights to yie Consumer Price Index Number, which is also known as the "General I for the Centre for that particular month.

In making the calculations, from month to month, the weights and prices are held constant. The current prices and price-relatives are conevery month and on that basis, the monthly Indices are determined.

It must be noted here that while computing the Indices, on the about basis, the 'Market basket' has not to be kept fixed not only in ter 'qualities', but also in terms of 'quantities' of the items priced.

14. Uses

Consumer Price Index Numbers are mainly used everywhere and espin this country, for the adjustment of wages and salaries. Thus, wag adjusted to changes in prices, as reflected by the Index, in order to prove the maintenance or improvement of a given level of real wages.

Consumer Price Index Numbers can also be used for real wage calculate. as deflators of money wages. The economic well-being of a class of ption, say, working class, is determined largely by how much they can be the money wages they receive and this is indicated by the real wage. wages can be calculated by dividing the money wages by the Consumer Index. So, the real wage Index comes out as a quotient between the wage index and the Consumer Price Index. It is, however, implied the money wage index and consumer price index relate to the same population, as far as possible.

Besides, Consumer Price Index Numbers also serve such other purpoprice adjustments in business and individual contracts. The Index is used by Governments as a guide to formulation of general economic policy cularly with respect to wages, prices and taxation. The use of the Corprice Index is given resorted to in the matter of adjustment of the ame alimony payments and annuities.

15. Reliability

wage-earners.

The reliability of the Index for the purpose of adjustments in wages of a group depends upon how far this group of wage-earners (to which the is desired to be applied) is similar to the group of population for which Index was actually constructed. If the consumption pattern of a given is too far removed from that of the Index population, the application Index to the former group may not be appropriate. For instance, in the of urban wage-earners and salaried employees, a single consumer price series might suffice, inspite of the existence of intraclass differences in mption patterns. On the other hand, it would not be proper to us an Index for wage negotiation or arbitration in the case of workers far refrom the above groups, say, mining workers or rural workers, whose contion patterns and environments may be greatly at variance with those of

16. Limitations

The use of sampling methods in the collection of price data introduces sampling errors in the compilation of the Index. Hence, it is necessary to ensure the representativeness and adequacy of the samples selected at several stages, with a view to minimising these errors. This will result in greater reliability of the Index in its various uses and applications. Nevertheless, some of the limitations of the Index in this regard are briefly as under :-

- (i) Under no circumstances can the Consumer Price Index be used to measure changes in costs or standards of living, since both are affected by many factors other than changes in prices measured by the Index.
- (ii) The Index cannot be used to measure differences in price levels between one place and another. It measures only time-to-time changes in the various places for which the indices are constructed. A higher index for one place does not, therefore, necesarily mean that prices are higher there than in another place with a lower index; it merely means that prices have risen faster in one place than in the other, since the respective base-periods.
- (iii) The movements of the Consumer Price Index Numbers cannot also be compared with the movement of Wholesale Price Index Numbers, mainly because there are structural differences in the two series and moreover the impact of wholesale price variations need not necessarily be reflected in retail prices (which alone are utilised in the compilation of Consumer Price Index Numbers) concurrently.

A Consumer Price Index, like other Index numbers, is a type of statistical. average and as such in its construction and use it is subject to all the rules and limitations pertaining to statistical averages. However, the limitations of the Index have been examined by Experts in Economics and Statistics, by Users of the Index and by various Authorities, including Governmental Committees, etc. and it is generally agreed that the Consumer Price Index Number, though not absolutely perfect, is a very satisfactory measure of what its sets out to measure and that it can be used, with confidence, for the purposes for which it is designed.

PART II HISTORICAL DEVELOPMENTS

Marcain from Natherna 11 June 1. The Indian Scene

The construction and maintenance of Consumer Price Index Numbers in India dates back to the period following the close of World War-I. The sleep rise in prices emerging after the close of World War-I compelled the then Provincial Governments to give due consideration to the question of rise in Cost of Living and obliged them to conduct Socio-Economic Surveys amongst the Working Class, as precursor to the measurement of Cost Living. As such, Family Budget Enquiries, at the instance of the Provincial Governments, were conducted, though not on quite scientific lines, in certain important

Budget Enquiries in Bombay City, in 1921, again in Bihar 1923, in Sholapur in 1925 and in Ahmedabad in 1926. The Royal Commission on Labour, while reviewing the position, in 1931, stressed the great paucity of statistical material in India for judging the standard of living of the workers. The Commission observed in this regard as follows:—

- "The construction of reliable cost of living indices, which should be one result of the enquiries we advocate, would be of the greatest assistance to the Employers and Government in the provinces concerned."
- 2. The abovesaid recommendation of the Commission gave a great fillip to the conduct of Family Budget Enquiries and for the construction of series of Cost of living Index Numbers based thereon, on more scientific lines in the country. As such, Family Budget Enquiries were conducted in a number of the then Provinces in India, viz. Bombay, Madras, U. P., etc. The World War-II again brought in its wake a sharp rise in consumer prices and therewith the need to compensate the employees for the same through payment of suitable "Dearness Allowance" to them. The Rau Court of Enquiry (1940), constituted under the Trade Disputes Act, 1927, to investigate into the question of payment of Dearness Allowance to the Railway employees, observed as follows, on the question of compilation and maintenance of Cost of Living Index Numbers in India:—
 - "The first requisite for any satisfactory revision of the allowances that we have recommended is the preparation of up-to-date cost of living index figures for 3 distinct classes of areas—city, urban and rural. We would accordingly recommend that the question of preparing and maintaining such figures for the purposes of Central Government be considered by the Government of India."
- The abovesaid recommendation of the Rau Committee was a land-mark in the history of Cost of Living Index Numbers in India. The Central Government accepted the abovesaid recommendation of the Rau Committee and took up the responsibility of compiling and maintaining series of Cost of Living Index Numbers for certain important Centres in the country. In 1941, therefore the Government of India initiated the 'Cost of Living Index Number Scheme, and during the years 1943-46, the cost of Living Directorate conducted Family Budget Enquiries in as many as 22 important industrial Centres in the country. During World War-II and the period immediately thereafter, the Provincial Governments and the Princely states in India also conducted some Family Budget Enquiries. Based on the results of these enquiries, several new series of Working Class Cost of Living Index Numbers were initiated. These series of Indices, it may be mentioned here; were neither on uniform lines nor on sound technical basis. Nevertheless, the Labour Bureau, Simla; on the basis of the aforesaid Indices, started compiling and publishing an Interrim Series of All India average Working Class Cost of Living Index Numbers. The Original base period for this All India Series was 1944—100. However, later on, with the addition of few more component series, the base of the All India series was shifted to 1949—100.

receive Act, Cost swell there and are a

n e

- 4. In the Post War period, the compilation of Cost of Living Index Numbers received further impetus with the coming into force of the Minimum Wages Act, 1948, which makes it obligatory on the State Governments to maintain Cost of Living Indices for employees employed in certain unorganised and "sweated" industries falling within the purview of the Act. For this purpose, therefore, the State Governments as well as the Labour Bureau, Simla of the Government of India conducted Family Budget Enquiries at various Centres and for some of these Centres Working Class Consumer Price Index: Numbers are also being compiled by them.
- their representativeness in regard to the current situations, since the consumption patterns on which they are based are becoming increasingly outdated. Besides, the lack of uniformity in procedures, concepts, definitions, base periods, etc. adopted in the compilation of the different series, have also turned out to be hindrances in the way of building up a scientific National Consumer Price Index Number series; the need for which is being increasingly felt, with the rapid industrialisation of the country. Thus, the need for conducting fresh Family Budget Enquiries on Uniform scientific lines for revising and/or replacing the old series had become imperative. In the Second Five Year Plan, it has been observed in this regard as under:
 - "The existing wage structure in the country comprises in the main, a basi wage and a dearness allowance. The later component in a majority of cases has relation to cost of living indices at different industrial centres. These indices ahve not been built up on a uniform basis, some of them are worked out on primary data collected about 20 to 25 years ago and are, therefore, not a true reflection on the present spending habits of workers. Steps will, therefore, have to be taken to institutes enquiries for the revision of the present series of cost of living indices at different centres:"

Accordingly, the Government of India launched fresh Family Living Surveys during 1958-59 at 50 important industrial centres all over the country, on uniform and scientific lines laid down by the Technical Advisory Committee on Cost of Living Index Numbers, which was constituted by the Government, in 1954 for the purpose. On the basis of the weighting diagrams (average expenditure patterns) thrown up by these enquiries, new series of Consumer Price Index Numbers on base 1960=100, have been constructed for all the 50 Centres by the Labour Bureau. Based on the index number series for these 50 centres, an All India Average Consumer Price Index Number Series on base 1960=100, has also been constructed on the broad methodology approved by the Technical Advisory Committee. The Committee on Labour Statistics set up by the National Commission on Labour (1966-69) made the following observation in regard to the new series of consumer price index maintained by the Labour Bureau and the National Commission on Labour endorsed the conclusion.

"The new All-India Index with 1960 as base constitutes a distinct improvement over the interim series with 1949 as base."

2. The Scheme in Maharashtra

As is well known, the Maharashtra State has been the pioneering State in the Country in so far as all labour matters are concerned, including matters concering conduct of Working Class Family Budget Enquiries and compilation of Consumer Price Index Numbers based on the results thereof. The Bombay Labour Office, which perhaps is the oldest Labour Office in India, when constituted in April 1921, was assigned the following 3 functions:—

- (1) Labour Statistics and Intelligence.—To ascertain the conditions under which labour in different industries and employments works and to compile statistics relating to wages, hours of work, strikes, and lock-outs and other similar matters, to conduct family budget enquiries and to construct Cost of Living Indices based thereon;
 - (2) Industrial Disputes.—To promote settlement of Industrial disputes, when they arise; and
 - (3) Legislation and other matters relating to Labour—To advise Government, from time to time, as regards the necessity of new legislation or the need for amending the existing legislation concerning labour matters.

Immediately after its constitution, the Bombay Labour Office, under the stewardship of Mr. George Findlay Shirras, who was its first Head, ventured into an enquiry into the Working Class Budgets in Bombay City and Island, during the period between May 1921 and April 1922. The Enquiry embraced no less than 2,473 Working Class Family Budgets and 603 Single Men's Budgets—a total of 3,076 Budgets. The results of the Enquiry were tabulated and a Report on the subject was submitted by the Bombay Labour Office to the erstwhile Government of Bombay, in December 1922. In paragraph 52 (page 45) of the Report, it has been observed as follows:—

"The very extensive and detailed inform-action which has now been brought together, will be further scrutinised from time to time by the collection of additional budgets, not merely in Bombay but in other industrial centres of the Presidency."

In the year 1926-27, the erstwhile State of M. P. conducted Family Budget Enquiries at the Nagpur Centre, which now forms part of the Maharashtra State. The said Enquiry related to labourers working in organised industries and was confined to Families having a monthly income of Rs. 100. About 1,000 Budgets were collected during the Enquiry. The 'weighting diagram thrown up by this Enquiry is based on 'average quantities consumed and not on 'average budgets of expenditure which is generally the case in respect of the 'Weighting diagrams' of the Indices of most of the Centres in the country, including all other Centres in Maharashtra State. This feature of the 'Weighting diagram' in respect of the Nagpur Centre is, therefore, a special feature in the Index of that Centre.

Further, as a follow upto the commitment made by it in its Report of the Enquiry into the Working Class Budgets in Bombay, in 1921-22, the Bombay Labour Office conducted a Family Budget Enquiry at Sholapur Centre, from February 1927 to January 1928. This Enquiry was confined to Families of Industrial Workers, the Heads of which were Cotton Mill Workers. About

902 Budgets were collected during the Enquiry. The families were selected from the main representative working class localities at Sholapur, on the basis of careful enquiries about the same. Roughly, about 1/8 th of the total number of tenaments were covered. Thereafter, the Bombay Labour Office conducted a Second Family Budget Enquiry in Bombay City, between May 1932 and June 1933. The results of the Enquiry were based on 1,469 Budgets collected from the then predominent working class localities in the City of Bombay, viz. 'E', 'F' and 'G' Wards. The Enquiry was limited to Families, the Head of which were in full-time employment. The sample adopted was 3 in 100 tenements in the Selected Localities. In October 1937, a similar Family Budget Enquiry was conducted by the Bombay Labour Office at the Jalgaon Centre. 86 Family Budgets were collected from Cotton Textile Workers during the course of this Enquiry. The erstwhile State of Hydrrabad had conducted Family Budget Enquiries in respect of the Aurangabad and Nanded Centres, during the year 1943-44. The families were selected for the purposes of these Enquiries with the help of random sample numbers. The results of these Enquiries are based on 400 budgets collected.

At all the above Centres, the average expenditure is divided into 5 main parts, viz., (1) Food, (2) Fuel and Lighting, (3) Housing, (4) Clothing and (5) Miscellareous. The Consumer Price Index Numbers, which were being complied by the Labour Office based on the results of the abovesaid Family Budget Enquiries in respect of the abovesaid Centres, have come to be known as the "Old Series" of indices for the said Centres. The base periods for the Old Series of Indices for the Centres in question are (1) Bombay (1933-34=100), (2) Sholapur (1927-28=100), (3) Nagpur (August 1939=100), (4) Jalgaon August 1939=100), (5) Aurangabad (1943-44=100) and (6) Nanded (1943-44=(100) respectively. A statement giving the relevant and material particulars in respect of these Old Series of Indices for the 6 Centres in reference is given below:

sion of Old Series of Indices in Maharashtra State

ne mid-siftees, the Old Series of Index Numbers in Maharashtra State had me quite outdated, as the consumption pattern of the Working Class for n the Indices were being compiled were believed to have undergone consiole change, over the period of time. In October 1953, the question of on of the present series of Consumers Price Index Numbers was, therefore, ssed at the Joint Conserence of Central and State Statisticians. crence recommended that the only way of improving the Index Number. s was to conduct fresh Family Budget Enquiries, on a uniform basis; ighout the country and to obtain weighting diagrams based on the current imption pattern. With this end in view, in 1958-59, the Government of undertook Family Living Surveys at 50 important Factories, Mines and ation Centres through out India. From the Maharashtra State, Family et Enquiries for Bombay, Sholapur and Nagpur were conducted by the rnment of India, in the year 1958-59. Similar Surveys or Enquiries were taken by the State Government, in the year 1958-59, in respect of the es at Jalgaon, Aurangabad and Nanded. In addition, the State Governalso conducted Family Budget Surveys in respect of the Poona Centre g an important Industrial Centre). In respect of the Centres at Bombay, pur and Nagpur, the prices taken into account are for the year 1960, in respect of the remaining four Centres, viz., Jalgaon, Aurangabad,

Consumer Price Index Numbers for the Bombay, Sholapur and Nagpur es cover six groups of consumption items, viz., (1) Food, (2) Pan, Supari, Co, etc., (3) Fuel and Light, (4) House Rent, (5) Clothing, Bedding and year, and (6) Miscellaneous groups whereas the Index Numbers for the ning centres comprise only five groups of consumption items, viz., (1) (2) Fuel and Light, (3) House Rent, (4) Clothing and Footwear, and iscellaneous groups. It may be clarified here that in the Indices for the on, Poona, Nanded and Aurangabad Centres, the consumption items

ed and Poona, the prices taken into account are for the year 1961.

Supari, etc., are included in the Miscellaneous Groups of the respective

n after the aforesaid Enquiries were completed and full details of the sed New Series were being worked out, it had been represented to Govern-hat the present Series of Consumers Price Index Numbers for Bombay t adequately reflect the existing pattern of consumption and variation in for the following reasons:—

The price collection in respect of certain items did not take place at all, iew of certain items being frozen, such as certain varieties of cloth;

The price collection was faulty or inadequate and not in line with reality, as house rent or selection of shops for purposes of pricing.

i) Wrong basis had been taken for price collection, as in the case of el to and from the native place.

Ortain items of expenditure had practically gone out of existance due ompulsory change effected by law in the item of expenditure, such as item nedicine on account of medical benefit under the Employees' State Insunction of the country of the period

of Family Budget Enquiry on which the proposed new series of Consumer Price Index Numbers for industrial workers was based was different from the base period for the proposed new series and there had been variation in prices during the two periods.

Lakdawala Committee

Therefore, the State Government had appointed, on 22nd August 1963, an Expert Committee, under the Chairmanship of Prof. D. T. Lakdawala, Director, Department of Economics, University of Bombay, to examine (i) the position of readjustment in the Consumers Price Index Series in Bombay; and (ii) linking of fresh Series of Consumer Price Index Numbers with the existing series. The other two Members of the Committee were (i) Dr. K. M. Mukerjee (Reader; Gokhale Institute of Politics and Economics, Poona) and (ii) Shri C. V. Rao (Deputy Director of Statistics, Reserve Bank of India, Bombay). The terms of reference of the Committee were as follows:-

(i) To examine the validity of the submissions made and make recommendations as to whether any readjustment is necessary, in the existing

series, and if so, what re-adjustment should be made; and

(ii) To consider how the fresh Series of Consumer Price Index Numbers for Bombay, which Government proposes to introduce, should be linked with the existing series, so re-adjusted if found necessary, and, in so considering, take into consideration the factor that the period of Family Budget Enquiry, on which the proposed new series of consumers price index numbers for Industrial Worker is based, is different from the base period for the proposed new Series. and the second of the second o

The Committee submitted its Report to Government on 7th January 1964. The recommendations of the Committee were as follows:—

(i) It would be desirable to revise the current index as in 1960 and that the revised index number for 1960 (average) should be 449 i.e. 29 points more than the published index figure;

(ii) That no adjustment is necessary in the New Series on account of the fact that its base period is different from the period of Family Budget

(iii) That the New Series should be linked to the current revised series at 1960 by a simple ratio linking and that the linking factor should be 4.49.

The recommendations of the Committee were discussed by the State Government with the representatives of important organisations of employers and central organisations of Labour. After careful consideration of the recommendations of the Committee and the comments put forth by the organisations of employers and employees, the Government of Maharashtra decided as follows:

The principles laid down by the Committee, in so far as they relate to the readjustment of the current Consumers Price Index Series for Bom-

bay, should be accepted.

(ii) As the Organisations of employers and employees want to study the full details regarding the 1958-59 Family Budget Survey, the introduction of the Nicoland Survey, the Nicoland Survey ction of the New Series and linking it up with the Current Sories should be deferred, for the time being.

(iii) The Index Number, for the month of December 1963, in the current series should be published duly readjusted in accordance with the recommendations of the Expert Committee.

The Index Number for December 1963 was, therefore, corrected on the basis

of the recommendations made by the Committee.

mer tho

ng

hc

10

of

g

Government also decided that, with a view to removing any apprehension, in future, the grades and specifications of items included in the Series should be published in the Labour Gazette, for general information.

The Expert Committee felt that the New Series should be linked with the Current Series, as at 1960, and, therefore, did not take into account certain points raised by the employers and the empolyees, as either they were not necessary for revising the index at 1960, or because comparable prices and other relevant data, relating to those items were not available. These points were as under:—

- (i) The proportion of consumption of Government and free market
 - (ii) Changes in the mode of purchase of food atricles by the workmen; and

(iii) Substitution of suitable equivalent items of cloth in place of present

items for facilitating retail price collection.

Further, a doubt had been raised regarding the Unit of quantity utilised by the Committee in re-adjusting the index figure for 'Ghee' by resubstituting Ghee for Vanaspati.

The Government therefore, referred the above points back to the Committee, with a request (i) to examine them in the light of such data as may be available then, (ii) to make Number, in future, and (iii) to submit their report within six Weeks from 5th February 1964. The Committee was authorised to hear the Associations of Employers and Central Organisations of Trade Unions before making its recommendations.

There being no separate series of Consumers Price Index Number for the Poona Centre, and taking into consideration the fact that there was rapid industrialisation in and around Poona, the State Government decided to undertake, through the agency of the Commissioner of Labour and Director of Employment, Family Budget Surveys for the Poona Centre, during 1959. The results of the enquiry were tabulated and placed before the Consumer Price Index Committee. Thereafter the results of the enquiry and the final report for the proposed series for Poona Centre were submitted to Government for its approval. The Schedules concepts and the general procedure of work for this enquiry were adopted, with suitable modifications, in the light of the conditions prevailing at this Centre, from the Government of India, National Sample Survey Organisation similar enquiries.

The Committee, after examining the issues referred to it, recommended in regard thereto as follows, in its Report, which was submitted by it to Government, on 14th August 1964:—

(i) In compiling the Consumer Price Index Series for Bombay City, in futuer, Rice should be treated as one commodity and its price index should

be calculated according to the method outlined by it in paras 4.6, 4.7 and 4.8 of its Report.

- (ii) As the Employers' grain-shops are availed of by about 6 per cent of the working class and as the most important articles supplied therein are Rice, Wheat and Sugar, which they sell at the same price as at other Fair Price Shops, it is not necessary to introduce one or two Mill Shops in the twenty four shops selected, at present, for the purpose of price collection. In case, however, much larger number of workers take advantage of these Shops, they should be given proper representation.
- (iii) Data on Clothing items be collected for six months on the lines mentioned in paragraphs 4·15 and 4·16 of the Committee's Report, so as to determine the advisability of introducing the Census Method' in the Compilation of Cloth Price Index. Till then, the present method should be continued.

The abovesaid recommendations of the Committee were accepted by Government and the Old Series of Indices for six selected centres in Maharashtra State, viz. Bombay, Sholapur, Nagpur, Jalgaon, Aurangabad, and Nanded Centres, were re-adjusted accordingly. The Index for the Poona Centre required no re-adjustment, it being in the New Series. After thus readjusting the Old Series of Indices, an opportune time for the introduction of the New Series was looked for Several rounds of discussions were carried out by the State Government with important organisations of Employers and Labour, for arriving at an agreed solution for the introduction of the New Series, so that the switch-over from the Old Series to the new Series could be smooth. Meantime, however, it was found that the problem of introduction of the New Series and the linking factor had been taken to the Supreme Court by the Employers at Ahmedabad and since the problems involved in that case were similar to the problems being faced in this State, it was thought fit to await the final decision of the Supreme Court in the matter. This decision of the Supreme Court was given in the month of August 1965 and thereafter further discussions were held by the State Government, with the Organisations of Employers and Unions. Ultimately, the New Index Series was introduced in Bombay, in the month of November 1965, by publishing the October 1965 Index Number in the New Series. Likewise, the Index Numbers at Sholapur and Nagpur, for the month of October 1965, were published in the New Series. The New Index figures at Jalgaon was introduced in the month of November 1965, at Nanded, in December 1965, and at Aurangabad, in January 1966. Thus, in all the old six centres, the New Index Series were introduced. The New Index number at Poona, however, was introduced, in the month of April 1965, as there was no problem of linking to the old Series in the case of this The linking factor in all these cases is a simple arithmetical linking between the two Series at the base year, as per the recommendations of the Lakdawala Committee. The base years for the Index Series at Bombay, Sholapur and Nagpur is 1960, while it is 1961 in the case of the remaining four Centres. With the introduction of the New Series, the Index Numbers in the Old Series have been discontinued and the same are not being published since then. and the set less to be at the A

sent Series of Indices in Maharashtra State

hus, at present, Consumer Price Index Numbers (New Series) for the king Classes are being compiled in Maharashtra State in respect of 7 eted centres in the State, viz. Bombay, Sholapur, Nagpur, Jalgaon, Nanded, angabad and Poona, respectively. Further, while the Index Numbers for Bombay, Sholapur and Nagpur Centres are based on the results of the pily Living Surveys conducted by the Government of India during the year 3-59, the Indices for the Jalgaon, Nanded, Aurangabad and Poona Centres pased on the findings of similar Surveys conducted by the State Government ne same, i.e. the year 1958-59. However, while the base period for the x Numbers for the Bombay, Sholapur and Nagpur Centres is 1960=100, ase period for the Indices for the Jalgaon, Nanded, Aurangabad and Poona res is 1961=100. Moreover, the aforesaid Series of Indices in respect of selected Centres in question are linked to the Old Series of Index Numbers he said Centres, after necessary re-adjustments, in accordance with the nmendations of the Lakdawala Committee, through simple arithematical ng factors. These linking factors are 4.44 for the Bombay Centre, 3.82 holapur Centre, 5.22 for the Nagpur Centre, 5.29 for the Jalgaon Centre, for the Nanded Centre and 2.22 for the Aurangabad Centre, respectively. atement summarising the relevant and material particulars about the nt Series of Consumer Price Index Numbers for the Working Classes for selected Centres in Maharashtra State, follows:—

Statement giving relevant particular about the Consumer Price Index Numbers for the Seven Selected Centres in Maharashtra State

PART III SPECIAL FEATURES

The Maharashtra State being the pioneering State in India in the matter of construction and maintenance of Consumer Price Index Numbers for the Working Classes, it is but natural to expect that the Indices in respect of the said State would have certain special traits. The outstanding features in respect of the Indices of the Maharashtra State are, inter-alia, as under:—

(i) The Indices are compiled, since their inception, by the Labour Commissioner's Office, unlike the Indices in respect of most of the other States, where they are compiled either by the Labour Bureau, Simla or by the State Directorate of Economics and Statistics:

(ii) 'Fool-proof' Price Collection Machinery;

(iii) 'Fool-proof' Computation Machinery

(iv) Pro-rata Re-distribution of Weights of Cereal Items, in cases of Short-falls in Supplies under Rationing/Informal Rationing Systems;

(v) 'Census Method' of Collection of Prices of Clothing Items in respect of the Indices for the Jalgaon, Nanded, Aurangabad and Poona Centres: and

(vi) The 'Weighting Diagram' in respect of the Index for the Nagpur Centre is based on 'Average Quantities Consumed'.

The abovesaid special features in respect of the Indices of the Maharashtra State are briefly discussed below:—

(i) Compilation of Indices by the Labour Commissioner's Office.—As has been mentioned earlier, the Bombay Labour Office on its constitution, in April 1921, was, inter-alia, enjoined with the function of conducting Family Budget Enquiries and constructing Cost of Living Indices based thereon. The first such Family Budget Enquiry was conducted by the Bombay Labour Office for the Working Classes at the Bombay Centre, during the period between May 1921 and April 1922, and Cost of Living Indices based on the findings of the said Enquiry were constructed by the said Office. Since then, the Bombay Labour Office has continued to conduct Family Budget Enquiries, from time to time, in respect of different selected Centres in the State and it has been compiling and publishing regularly every month Consumer Price Index Numbers based on the results of the said Enquiries, till-to-date. It is in the fitness of things that the Bombay Labour Office should compile and publish the Indices, since it always has its fingers on the pulse of Industry and Labour, because it has to, day-in and day-out, deal with varied and vexed industrial relations problems. In other States, the Indices are either compiled by the Labour Bureau, Simla or the State Directorate of Economics and Statistics, who have hardly anything to do with Industry and Labour beyond compilation of Statistical Data. It may be stated with emphasis here that the compilation of Indices by the Labour Commissioner's Office in no way affects the quality of the Index computation work. This is what the Rau Court of Enquiry (1940) had to say about the Bombay Index in its Report, which was published in 1941. "The combay figure, which in most respects is above criticism, is not quite up-to-date in certain items, and although the Bombay Labour Office has been doing its best to bring it up-to-date, the difficulties have so far proved insuperable and the defect still remains:

Knowing how much care and thought the Bombay Labour Office besto on the preparation of its figures, we should be surprised if the cost of living figures prepared at other centres were less open to criticism."

For the purposes of collection of prices of the consumption items include in the Index Numbers in respect of the seven selected Centres in Maharash State, 12 markets at Bombay and 4 markets each at Sholapur and Nag Centres from predominantly working class areas have been selected and each such market, two shops from where most of the workers make their p chases have been fixed. Similarly, II shops each have been fixed in the work class areas at the Jalgaon, Poona, Nanded and Aurangabad Centres. Pri of the consumption items included in the Indices of the seven Centres in qui tion are collected by the Price Collection Machinery from the fixed she every Saturday, which is the weekly Price Collection. Day, information respect of such consumption items like Bus fare, Railway fare, Postal charge Electricity charges, Cinema Tickets, School fees, News-paper, etc., is howe collected by the Machinery once every month, i. e. on the Saturday follow the 10th of each month, directly from the Authorities concerned. Further the case of the consumption items like Vegetables, Fruits, Fish, etc., wh undergo considerable Seasonal variations, the prices are collected for the v eties selected for the month. Besides, in respect of the Clothing Group, prices of all the varieties of the items included in the Index are collected with certain broad specifications and a mediaum of each item is worked out a calculating the per square metre price of all the varieties of each of the ite The house-rent figures are obtained from six-monthly house-rent surveys selected tenements at each centre.

'Fool-proof' price Collection Machinery.—The price data utilised the purposes of compilation of the Indices in Maharashtra State collected by trained and experienced Price Collectors, who are se members of the staff of the Labour Commissioner's Office. The data is being collected in accordance with the instructions laid d in the Manual of Instructions for Price Collectors prepared by Labour Bureau, Simla, which is based on a scientific apraisal of the subject (which are also in keeping with the accepted International principles and ctices in the matter). Most of these Price Collectors have been doing the Collection work for over 2 decades now and they are, therefore, well-conver with the data collection techniques and methodlogy. Further, the price of tations collected by the Price Collectors are invariably checked up by train and experienced Price Inspectors of the Labour Commissioner's Office, have a standing of over 2½ decades experience in this work. All doub quotations and quotations showing wide variations are, therefore, 'straighte out' through the Inspections made by these Prices Inspector. In addit there is further supervision over the data collection work by the Price Co ctors at the level of Price Supervisors, who are senior Officials of the Lat Commissioner's Office. One of these Officers is of the rank of Deputy Direct Directorate of Economics and Statistics, Bombay who is on deputation the Labour Commissioner's Office especially for the Index Compilation w These two Officers inspect, at random, the work of the Price Collectors and Price Inspectors and take appropriate decisions after making due enqui bestom

on such crucial questions like substitution of varieties, linking of prices. repetition of prices, imputation of weights, etc. Besides, in respect of the Indices for the Bombay, Sholapur and Nagpur Centres in the State, there is a separate and independent supervision over the price collection work done by the Price Collectors of the Labour Commissioner's Office by the Asstt. Director (Western Region), Labour Bureau, Simla, who is posted at Bombay especially for the said work. Moreover, with a view to keeping the Price Collection Machinery in full trim and attend with the latent Market trends, weekly Meetings of the Price Collectors and Price Inspectors are held by the Price Supervisors on the next working day of the Price Collection day when all matters and problems, if any, pertaining to the Price Collection work during the week in question are discussed threadbare experiences exchanged and guidance and instruction wherever necessary given to the Price collectors and Price Inspectors by the Price Supervisors. Finally, the Price data thus collected by the Price Collectors and inspected and verified by the Price Inspectors and the Price Supervisors [as also by the Asstt. Director (Western Region) of the Labour Bureau, Simlal is subjected tocareful table scrutiny by the trained and experienced compilation staff of the Labour Commissioner's Office and any descripancies noticed by them in the Price quotations are referred back by them to the Price Collection Machinery. for reverification and report, before the same are accepted by them, for tabulation. Further, with a view to keeping the 'cards open', the price data collected by the Price Collection Machinery is kept open for inspection by accredited representatives of Trade Unions and Employers in the Labour Commissioner's Office, on the second working day after the Price Collection day. Not only this, the Price data collected by the Labour Commissioner's Office, along with the other relevant Index Particulars are published regularly every month by the Labour Commissioner's Office in the monthly Labour Gazette issued by that Office each month. It would thus be observed that the Price Collection Machinery of the Labour Commissioner's Childhardly any scope or chance for 'tripping' anywhere. Machinery of the Labour Commissioner's Office is 'Fool-proof' and there is

(iii) 'Fool-proof' Computation Machinery.—The Indices for the 7 selected Centres in Maharashtra State are compiled by a separate set of trained and experienced Index Computation Staff of the Labour Commissioner's Office, most of whom have an experience in this field for nearly 2 decades now. Policy decisions regarding the Index Computations are initially taken by the Deputy Commissioner of Labour, who is the incharge of the Index Compilation work. The Index Computations are also initially checked by the Officer on Special Duty (Statistics), Bembay, who is of the Rank of Deputy Director, Directorate of Economics and Statistics, Bombay and who is on deputation to the Labour Commissioner's Office especially for this work. The Index Computations are also got independently checked up by the Labour Commissioner's Office from the Directorate of Economics and Statistics, Bombay every month. Further, the Indices compiled by the Labour Commissioner's Office are placed by it, every month, before a specially appointed Committee of Experts by the State Government, for its scrutiny and authentication, before they are released This Committee has been functioning since the year 1948. The present

composition of the Committee is as follows:

Shri B. S. Kalelkar,

Retired Judge of Small Causes Court and Commissioner of Workmon's Compensation, Bombay.

Members

The Commissioner of Labour, Bombay.

The Director, Directorate of Economics and Statistics, Bombay.

Shri S. R. Mehta, Professor, Elphinstone College, Bombay.

Shri T. R. Bhagwat, Chairman, Cloth Markets Board, Bombay.

Shri K. S. Narayan, Joint Director Food and Civil Supplies Department, Bombay.

. Member-Secretary

Deputy Commissioner of Labour, Bombay.

It is only after the Indices for the Selected Centres in Maharashtra State are fully scrutinised and duly authenticated by the abovementioned Committee, that they are kept ready for publication by the Labour Commissioner's Office. Further, in so far as the Indices for the Bombay, Sholapur and Nagpur Centres are concerned, the same are also being independently and simultaneously compiled, on common weighting diagram and price data, by the Labour Bureau. Simla. Therefore, it is only when the Indices for these 3 Centres in the State, as compiled by the two Agencies in question, fully tally in all respects, that they are finally released by the Labour Commissioner's Office, along with the Indices of the other 4 Centres in the State, after authentication thereof by the above Committee. Thus, here again, it would be noticed that the Index Computation Machinery of the State Government is 'fool-proof' in all respects, inasmuch as there is a hierchy of checks and counter-checks at each stage of the Index Compilation Work and, therefore, there is hardly any scope for going wrong.

(iv) Pro-rata Re-distribution of Weights of Cereal Items.—In the context of present shortage of Cereals in the wake of drought conditions as also the take over of wholesale trade of Wheat in the country, a situation was discernable where there was substantial reduction in admissibility from Government sources, both in the statutory and informal rationing centres, while there was no corresponding open market sales even where there was no statutory rationing of cereals in particular Centres. In view of the mounting pressure of shortages and price rise in recent months and resultant agitation for adjustment to take care of the same in the Index. which determines the Dearness Allowance of the working class, the issue was taken up to the T.A.C. by the Government of Maharashtra and was discussed in its 11th Meeting, held at Delhi, on 21st June 1973. The T.A.C. advocated a cautious approach in the matter and tressed the need for a study in depth.

Accordingly a Sub-Committee, consisting of the following members, was constituted by the T. A. C. at its 11th Meeting held on 21st June 1973, for the purpose:—

1. Shri Ram Saran,

Economic and Statistical Adviser, Ministry of Food and Agricul- Memberture, Government of India.

2. Shri M. A. Telang, Director, Bureau of Economics and Statistics, Government of Maharashtra.

Member

3. Shri S. K. Gupta
Joint Director, Central Statistical Organisation, Government of India.

Member

4. Shri K. K. Bhatia,

Director, Labour Bureau, Government of India

Member

5. Shri P. J. Ovid.

Deputy Commissioner of Labour,

Government of Maharashtra

Co-opted Member

The Sub-Committee was assigned the responsibility of studying the effect on the Consumer Price Index of the short supply of cereals from Government sources, particularly when the same could not be made good from open market sources, and to evolve a suitable method for compilation of the Indices, which would take account of such situations.

The Sub-Committee completed its deliberations in 3 sittings between 9th July 1972 and 13th November 1973. The Sub-Committee submitted its Report in the matter to the T. A. C. by the end of November 1973. The T. A. C. accepted the recommendations of the Sub-committee, as contained in its Report, which are as follows, and advised the State Government accordingly:—

"1. No corrective action need be taken in the Consumer Price Index as long as shortage in admissibility of individual commodity is up to 15 per cent., as compared to the base year consumption level, in Centres covered under Statutory Rationing.

- 2. If the shortage in supply of a particular commodity exceeds this limit, in a statutory rationing centre, a corrective action suggested on the basis of indications based on material studied is to distribute the portion of weight corresponding to the short fall among all other Food items pro-rata except to the Commodity under short supply.
- The fair prices and open market prices of an item under informal rationing may be utilised by assigning appropriate weights; the weight for fair price may be determined on the admissibility through fair price shops and the balance out of the total base year requirements being assigned to open market prices. If the open market prices are not available due to the non-availability of informally rationed cereal; in the open market, the situation will be dealt with in the same way as in case of statutory Rationing,
 - (i) No adjustment or corrective action need be taken, if the short fall in admissibility of individual commodity through Fair Price Shops is upto 15 per cent. In other words, only Fair Price may be used for compilation of Index Number.
 - (ii) If the shortage through Fair Price supply exceeds 15 per cent., then the corrective action suggested for statutory rationing centres, as in para. 2 above, should also be made applicable.

The Government of Maharashtra also accepted the abovesaid recommendation tions of the T. A. C. and, in accordance thereof, applied corrective action to the Bombay Index from the month of December 1973 onwards, and to the Poon Index from the month of April 1974 onwards. The Indices for the other centres in the State required no corrective action whatever, as there has been no problem thereat regarding short supply of cereal items that are priced for the Indices of those centres.

- (V) 'Census Method' for collection of Prices of Clothing Items.—The Lakda wala Committee, in its Second Report, dated 14th August 1964 had, inter alia recommended that the Clothing Items be collected as per the 'Census Method i.e., after prescribing the broad variety of each item of cloth in the Index Series the prices of all sub-varieties sold in the selected shops be taken into accoun in the compilation of the Cloth Price Index. This recommendation of th Committee having been accepted by the State Government, the Census method of collection of prices of clothing items is being followed in respect of the indice for the Jalgaon, Nanded, Aurangabad and Poona Centres. The advantage of this method, as pointed out by the Lakdawala Committee in its aforesaid Report is twofold. Firstly, the method is based on the whole price range of the varieties rather than on the fixed sub-variety. The changes of an accidental o deliberate distortion which crop up, when one specified variety disappears from the market, also do not arise.
- VI 'Weighting Diagram' in the Index of the Nagpur Centre.—The 'weight ing diagram? thrown up by the Family Budget Enquiry of 1926-27 at the Nagpu Centre is based on 'Average Quantities Consumed' and not on 'average budgets of expenditure 'which is generally the case in respect of the 'weightin diagrams' of the Indices of most of the Centres in the country, including a other Centres in Maharashtra State. This feature of the weighting diagram i respect of the Nagpur Centre is, therefore, a special feature of the Index of the Centre.

MINIMUM WAGES ACT, 1948

Vide Government notification, Industries and Labour Department, No. MWA.-5675/104084-Lab-III-A, dated 21st March, 1975, published in Maharashtra Government Gazette, Part I-L, dated 10th April 1975, at pages 1742 to 1748 the Government of Maharashtra after considering the advice of the said Committee, hereby revised the minimum rates of wages as fixed in the Government of Maharashtra, Industries and Labour Department, Notification No. MWA. 5662(1)2763/Lab-III, dated 27th July 1966, in respect of the employees in the said scheduled employment and with effect from the 1st day of April 1975 refixes minimum rates of wages consisting of—

- (i) the basic rates of wages as set out in column 3 of the First Schedule hereto, in respect of each Zone specified in column 3 as the basic rates of wages payable by the month in such Zone to the classes of employees mentioned against them in column 2 thereof
- (ii) special allawonce, the rate of special allowance being adjusted as provided in clause 2.
- 2. The complent authority shall, on declaring the Consumer Price Index Number for Working Class (New Series) specified in column 3 of the Second Schedule hereto, to be the cost of living index number applicable to the employees employed in the said scheduled employment in pursuance of clause (d) of sub-section (2) of the said Act, calculate the average of the cost of living index applicable to the employees in the areas specified in column 2 of the said Second Schedule for every three months in a year (the period of first three months commencing from 1st day of January, and ascertain the rise of such average in terms of points over the index numbers mentioned against them in column 4 of that Schedule. For every such rise in the number of points specified in column 5 of the said Schedule the special allowance (hereinafter referred to as "the cost of living allowance") payable to the employees for each of the three months immediately following the period in respect of which such average has been calculated as aforesaid shall be at the rates shown against them in column 6 of that Schedule.
- 3. The competent authority shall compute the cost of living allowance in accordance with the directions made in clause 2.
- 4. The cost of living allowance computed as aforesaid shall be declared by the competent authority by a notification in the Official Gazette in the month of January, when such allowance is payable for each of the months of January to March, in the month of April when such allowance is payable for each of the months of April to June, in the month of July when such allowance is payable for each of the months of July to September and in the month of October when such allowance is payable for each of the month of October to December.

Consumer Price Index Number for Working Class for March 1975

BOMBAY*

301-A rise of 1 point

In March 1975, the Consumer Price Index Number for Working Class (New Series) for the Bombay Centre with base: January to December 1960 equal to 100 was 301 being 1 point higher than that in the preceding month. The index relates to the standard of life ascertained during the year 1958-59 family living survey at the Bombay Centre.

The index number for the food group decreased by 1 point to 337 due to a fall in average prices of arhardal, gramdal, moongdal, masurdal, coconut oil, groundnut oil, vanaspati, fresh fish, dry fish, eggs, turmeric, dry chillies, onions, garlic, coconut, kalimiri, zeera and a fall in the sub-group index

number for the vegetables and fruits.

The index number for the pan, supari, tobacco etc., group increased by 25 points to 298 due to a rise in the average prices of pan-leaf, supari, katha, bidi, cigarettes and chewing tobacco.

The index number for the fuel and light group increased by 2 points to

364 due to a rise in the average prices of firewood and charcoal.

The index number for housing remained steady at 124.

The index number for the clothing, bedding and footwear group increased by 4 points to 274 due to a rise in the average prices of saree, shirting, trouers

cloth, markin, bush-shirt and chappal (ladies).

The index number for the miscellaneous group increased by 2 point to 235 due to a rise in the average prices of cinema-show, hair oil, tooth-powder, durrie, trunk, utensils, brass, bucket, laundry-charges, washing soap and tailoring charges.

SHOLAPUR*

345-A fall of 4 points;

In March 1975, the Consumer Price Index Number for Working Class (New Series) for the Sholapur Centre with base January to December, 1960 equal to 100 was 345 being 4 points lower than that in the preceding month. The index relates to the standard of life ascertained during the year 1958-59 family living survey in Sholapur City.

The index number for the food group decreased by 7 points to 393 due to a fall in the average prices of arhardal, gramdal, masurdal, groundnut oil, vanaspati, turmeric, chillies dry, tamarind, garlic, coconut, sugar and gur.

The index number for the pan, supari, tobacco, etc. group increased by 14 points to 243 due to a rise in the average prices of pan-leaf, pan (finished), supari and bidi.

The index number for the fuel and light, the clothing, bedding and footwear, the miscellaneous groups and housing remained steady at 292, 337, 241 and 162 respectively.

CONSUMER PRICE INDEX NUMBERS (NEW SERIES) FOR WORKING CLASS FOR SHOLAPUR CITY

NAGPUR*

332-A fall of 4 points:

In March 1975, the Consumer Price Index Number for Working Classeries) for the Nagpur Centre with base January to December 1960 e 100 was 332 being 4 points lower than that in the preceding month. The relates to the standard of life ascertained during the year 1958-59 family survey in Nagpur City.

The Index Number for the food group decreased by 7 points to 391 a fall in the average prices of arhardal, gramdal, moongdal, ground vanaspati, linseed oil, eggs, sugar and a fall in the sub-group index of vegetables and fruits.

The index number for the pan, supari, tobacco etc. group increase points to 229 due to a rise in the average prices of bidi and cigarettes.

The index number for the fuel and light group decreased by 11 p 267 due to a fall in the average prices of firewood and coal.

The index number for housing remained steady at 161.

The index number for the clothing, bedding and footwear group in by 3 points to 362 due to a rise in the average prices of dhoti, shirting, cloth, long cloth, markin, bed sheet and chappal (gents).

The index number for the miscellaneous group increased by 1 poindue to a rise in the average price of cinema charges.

AURANGABAD*

336-A fall of 1 point

In March 1975 the Consumer Price Index Number for Working Aurangabad Centre, with base year January to December 1961 equa was 336 being I point lower than that in the preceding month. relates to the standard of life ascertained during the year 1958-59 living survey at Aurangabad Centre.

The index number for the food group decreased by 3 points to 39 a fall in the average prices of rice, wheat, turdal, gramdal, moongdal, n karad oil, salt, turmeic, tamarind, Jeera, potatoes, brinjals, tomotoes and gur.

The index number for the fuel and light group remained steady at 25

The index number for housing remained stationary at 201.

The index number for the clothing and footwear group increased by to 304 due to a rise in the prices of dhoti, saree and cloth for trousers.

The index number for the miscellaneous group increased by 6 poin due to a rise in the average prices of pan leaf, bidi, utensils, wash hair oil, toilet soap and S. T. fare.

NANDED

358-A fall of 4 points-

-In March 1975, the Consumer Price Index Number for Working Class (New Series) for the Nanded Centre with base January to December 1961 equal to 100 was 358 being 4 points lower than that in the preceeding month. The index relates to the standard of life ascertained during the year 1958-59 family living survey in Nanded Centre.

The index number for the food group decreased by 9 points to 422 due to a fall in the average prices of wheat, gramdal, turdal moongdal, masurdal, groundnut oil, salt, tamarind, vegetables and gur.

The index number for the fuel and light group increased by 16 points to 273 due to a rise in the average price of fire-wood.

The index number for housing remained steady at 158.

The index number for the clothing and footwear group decreased by 1 point to 306 due to a fall in the prices of longcloth and a fall in the sub-group index number for footwear.

The index number for the miscellaneous group increased by 5 points to 237 due to a rise in the average prices of blades and S. T. fare.

JALGAON CENTRE*

339—A fall of 9 points.

In March 1975, the Consumer Price Index Number for Working Class for Jalgaon Centre with base January to December 1961 equal to 100 was 339 being 9 points lower than that in the preceding month. The index relates, to the standard of life ascertained during the year 1958-59 family living survey at the Jalgaon Centre.

The index number for the food group decreased by 13 points to 405 due to a fall in the average prices of wheat, turmeric, zeera, potatoes and garlic.

The index number for the fuel and light group remained steady at 251.

The index number for housing remained steady at 141.

The index number for the clothing and footwear group decreased by 11 points to 285 due to a fall in the price of coloured poplin.

The index number for the miscellaneous group increased by 2 points to 237 due to a rise in the average prices of panleaf, supari, washing soaps and bus fare.

POONA CENTRE*

295-A rise of 8 points-

In March 1975, the Consumer Price Index Number for Working Class for the Poona Centre with base January to December, 1961 equal to 100 was 29 being 8 points higher than that in the preceding month. The index related to the standard of life ascertained during the year 1958-59 family living survey at Poona Centre.

The index number for the food group increased by 11 points to 334 due to a rise in the average prices of rice, jowar, bajari, grinding charges, dry chillies spices, banana and tea (leaf).

The index number for the fuel and light group remained stationary at 346.

The index number for housing remained stationary at 127.

The index number for the clothing and foot wear group increased by 5 points to 285 due to a rise in the prices of saree, cloth for trousers, coloured popland chappal.

The index number for the miscellaneous group increased by 5 points 228 due to a rise in the average prices of supari, chewing tobacco, utensilaundry charges, toilet soap, tooth powder, blade and S. T. fare.

*The word "Work stoppages in the official sense means interruption of work a hereby used in that sense as virtually synoymos with "Strike". In compiling of the industrial disputes, however, disputes in which 10 or more persons are included.

Twenty-nine of the disputes arose over questions of "pay allowand bonus issues". Thirty-nine related to "Retrenchment and grievance personnel" One was on leave and hours of work and the remaining were due to other causes.

Out of the Thirty-five disputes that terminated during the course month. Eight were settled either entirely or partially in favour workers. Twenty-three in favour of the employers, while the result remaining Four disputes was indefinite.

3.577.870 Seven and 1.580 1.
